References—References should conform to the following order: name of author, title of article, name of periodical year of publication, month and volume with inclusive page—i.e., Lee GS: The heart rhythm following therapy will digitalis—In theory and practice. Arch Int Med 1979 May 44:554-562. They should be listed in the order in which they are cited in the text, numbered in sequence as punctuated as above.

Reprints—Reprints are available to authors at establish standard rates.

<sup>&</sup>quot;Entered as second class matter at the post office in San Francisco under the Act of March 3, 1879." Acceptable for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized August 10, 1918. Publication Number 084480.

# Proven Clinical Accuracy

THE CRITICAL FACTOR IN TB SCREENING

## ...and no easier method to confirm the results.

# Lederle Tuberculin, Old, TINE TEST

Indications: For screening for tuberculosis.

Precautions: Use with caution in persons with acute tuberculosis (activation of quiescent lesions is rare); and in patients with known allergy to acacia. Reactivity to the test may be suppressed in those receiving corticosteroids or immunosuppressive agents, or those who have recently been vaccinated with live virus vaccine such as measles, mumps, rubella, polio, etc. With a positive reaction, further diagnostic procedures must be considered, i.e., chest x-ray, microbiologic examinations of sputum and other specimens, confirmation of positive tine test (except vesiculation reactions) by Mantoux method. When vesiculation occurs, the reaction is to be interpreted as strongly positive and a repeat test by the Mantoux method must not be attempted. If a patient has a history of occurrence of vesiculation and necrosis with a previous tuberculin test by any method, tuberculin testing should be avoided. Similar or more severe vesiculation with or without necrosis is likely to occur.

Pregnancy Category C. Animal reproduction studies have not been conducted: whether Tuberculin, Old, TINE TEST® can cause fetal harm when administered to a pregnant woman or can affect reproduction capacity is unknown. Tuberculin, Old, TINE TEST should be given to a pregnant woman only if clearly needed. During pregnancy, known positive reactors may demonstrate a negative response.

Adverse Reactions: Vesiculation, ulceration, or necrosis may appear at test site in highly sensitive persons. Pain, pruritus and discomfort at test site may be relieved by cold packs or by topical glucocorticoid ointment or cream. Any transient bleeding at puncture site is not significant.

#### THE TWELFTH ANNUAL REVIEW COURSE IN GYNECOLOGY AND OBSTETRICS

This comprehensive course will be held at the Pasadena Hilton Hotel, Pasadena, California, Monday through Friday, October 11-15, 1982. It will review many basic concepts and update clinical management in every area of obstetrics and gynecology. Although the program will appeal to all, its direction will be toward those preparing for recertification examinations or the Oral OB/GYN Boards. A complete, wellorganized syllabus covering the entire five-day program will be supplied each participant.

TUITION: \$450 (includes 5 lunches)
CREDIT: 35 hours

Immediately following is the REVIEW COURSE FOR GYNECOLOGIC PATHOLOGY, scheduled for Saturday, October 16, 1982, also at the Pasadena Hilton. Review of pathological changes which occur in the female genital tract in response to inflammatory, neoplastic and abnormal hormonal stimuli as well as concepts of diagnosis and pathogenesis will be discussed; current terminology used in diagnosis will be emphasized. This course is designed primarily to assist those physicians who are preparing for the American Board of Obstetrics and Gynecology examinations.

TUITION: \$75 (includes lunch)
CREDIT: 6 hours

#### PERINATAL MEDICINE

This comprehensive course will be held at the Royal Lahaina in Maul, Hawaii, February 5-11, 1983. The course will focus on current management approaches to solve clinical problems. The "Case Management Problems" will begin with the presentation of a difficult clinical case. Question and answer sessions will be emphasized.

TUITION: \$425 CREDIT: 23 hours

Contact: Associate Dean, USC School of Medicine, Postgraduate Div., 2025 Zonal Ave., Los Angeles, CA 90033; USC School of Medicine, (213) 224-7051.

#### EPITOMES-PLASTIC SURGERY

prolonged immobility and subsequent rehabilitation.

Specific modifications of many muscle and musculocutaneous flaps are now established to allow partial muscle transposition to maintain the particular function of the muscle while still providing defect coverage. Skin-fascial flaps (that is, gluteal thigh and gastrocnemius) are based on musculocutaneous perforating vessels so that underlying muscle continuity with its origin and insertion is not disturbed. Such modifications are now standard techniques in the use of muscle and musculo-

cutaneous flaps in all regions to provide coverage with optimal recipient-site contour and minimal donor-site deformity.

STEPHEN J. MATHES, MD
